medicament; and

C1
administering a therapeutically effective amount of said aerosolized medicament to at least a portion of the pulmonary passages of a patient in need thereof.

Please cancel claims 3 - 5.

2/ 38. The method of claim [5] 2 wherein the mean aerodynamic diameter of the perforated microstructures is between 0.5 and 5 μm .

3/ 39. The method of claim [5] 2 wherein said perforated microstructures comprise a surfactant.

Sub
C2
39. (Once amended) An inhalation system for the pulmonary administration of a bioactive agent to a patient comprising:

a fluid reservoir;

a stable respiratory dispersion in said fluid reservoir wherein said stabilized dispersion comprises a fluorochemical continuous phase and a plurality of perforated microstructures comprising at least one bioactive agent suspended in and substantially permeated by the continuous phase wherein more than 30% of the average particle volume of the perforated microstructures is permeated by said suspension medium; and

a nebulizer operably associated with said fluid reservoir wherein the nebulizer is capable of aerosolizing and discharging the stable respiratory dispersion.

Please cancel claims 40 - 42.

1042/ 40. The system of claim [42] 39 wherein said perforated microstructures comprise a surfactant.

H 41. The system of claim [42] 39 wherein the mean aerodynamic diameter of the perforated microstructures is between 0.5 and 5 μm .

15/ 42. (Once amended) The system of claim 39 wherein said bioactive agent is selected from the group

C3
C4
consisting of antiallergics, bronchodilators, pulmonary lung surfactants, analgesics, antibiotics, antiinfectives, leukotriene inhibitors or antagonists, antihistamine, antiinflammatories, antineoplastics, anticholinergics, anesthetics, anti-tuberculars, imaging agents, cardiovascular agents, enzymes, steroids, genetic material, viral vectors, antisense agents, proteins, peptides, and combinations thereof.

Please add the following new claims:

19-52. The system of claim 39 wherein the respiratory dispersion comprises a creaming time of greater than 1 minute.

20-53. The system of claim 39 wherein the respiratory dispersion comprises a creaming time of greater than 30 minutes.

C4
21-54. The system of claim 39 wherein the perforated microstructures comprise a geometric diameter of 1-30 μm .

22-55. The system of claim 45 wherein the bioactive agent is an antiinfective selected from the group consisting of cephalosporins, macrolides, quinolones, penicillins, streptomycin, sulphonamides, tetracyclines, and pentamidine. --
